

What can we remember?

You do not need to upload this.

Can you remember the three different types of rock and examples of them?

What can we remember?

You do not need to upload this.

Igneous rock is formed when magma or lava from volcanoes cools.

Examples include basalt and granite.

Sedimentary rocks are formed over millions of years when sediments (tiny pieces of rocks and animal skeletons) are pressed together at the bottom of seas and rivers. Examples include sandstone, coal and chalk.

Metamorphic rocks are formed when other rocks are changed due to heat or pressure. Examples include slate and marble.

BIQQUESTION

Can humans control natural disasters?

Today's question

How would you report an earthquake?

Let's discuss - you do not need to upload this

What do you think these people are doing?

Research/Practical

Watch these videos of news reports of an earthquake in Los Angeles, California and one in Mexico.

<https://www.youtube.com/watch?v=iB5l2n2vkN8>

<https://www.youtube.com/watch?v=odwxY6mpMgs>

Research/Practical

Today's task is to film yourself reporting on an earthquake. Upload it onto Teams (you may need to send it to your teachers in chat if it doesn't upload in assignments but click the turned in button on Teams first).

You can use one of the earthquakes that you researched on Monday to report on.

You need to include the following:

- Where the earthquake took place and what time?
- How powerful was it?
- Did it cause damage or loss of life?

- If you like, you can interview someone in your house who can pretend to be an eyewitness.

DIGGING DEEPER

What do you think makes a good news report?

You do not need to upload this.

REFLECTION

Tell someone in your house the most interesting things you learnt about volcanoes and earthquakes.
